Part III: Detailed Office Action

Restriction Requirement:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, and 6-8, drawn to the use of VEGF in assay methods, classification dependent upon species.
- II. Claims 5, 9, and 19, drawn to identified substances, classification dependent upon species.
- III. Claims 10-18, drawn to methods involving identification of the phosphorylation state of proteins, classified in class 436, subclass 501.

The inventions are distinct, each from the other because:

The methods of Inventions I and III are separate and distinct because, although it is not clear what steps may comprise the methods of Invention I, the methods of Invention III do not require VEGF, and there is no requirement for determination of phosphorylation state in the methods of Invention I. Therefore, the two groups can be presumed to involve substantively different method steps and to use different products in the production of different results, and accordingly to require separate searches. Accordingly, restriction is proper.

Note that the products have been grouped together as Invention II, regardless of the method of identification, as it is likely that the same product could be identified by multiple methods. The products of Invention II are separate and distinct from each of the methods of Inventions I and III, as the method of identification does not define the product, and the methods and products require separate searches. Accordingly, restriction is proper.

Because these inventions are distinct for the reasons given above and recognized divergent subject matter, restriction for examination purposes as indicated is proper.
